Reasons For Allowance

The following is an examiner's statement of reasons for allowance: the prior art of record fails to show or suggest the use of a wedge shaped support cushion that includes both a curvilinear and substantially horizontal section on a top side combined with an arch running down the midline of the top side. The closest single reference found is the cited patent to Morrel (US 4,171,549), which shows an assembly of wedge shaped support cushions that includes a back cushion 10 of interest. The upper surface of the cushion is curvilinear in cross section, and terminates at an upper end that could be considered to be horizontal. There is no disclosure or suggestion of an arch extending across the top surface of the cushion. Moscot (US 5,700,059) shows a baby support of interest, with an upper support surface 2 that is curvilinear in shape and terminates at an upper horizontal portion. As shown in Figures 2 and 4 the upper surface does not have an arch, but is instead depressed across the surface with raised edges-exactly the opposite of the structure claimed. Nichols (US 5,440,770) shows yet another infant support that includes an inclined upper support surface 16 that terminates at a horizontal upper end 34. The surface 16 is flat across its width and includes raised sides that serve to restrain an infant. Since the prior art fails to show the combination of features noted above the claims are considered to be allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Radford, Greenawalt, Raftery, Klingemann et al, Rose, and Grigg show wedge shaped support cushions that are indicative of the general state of the art.
